Ecological Consultant Job Vacancy

Location:

Preferably Manchester, but East Sussex is possible

Main Responsibilities:

We are looking for a bright and enthusiastic individual to become the principal consultant involved with Phlorum's ecological survey and consultancy work.

The position will involve carrying out site surveys (Phase 1 and protected species), writing technical reports to a high standard and meeting with clients and regulatory authorities.

Phlorum operates at development/construction sites across the country, although the majority of projects are located in the South East and the North West. The work required of the successful applicant could involve long hours on site and periods staying away from home.

Other Responsibilities:

We are keen for the appointed person to develop and assist in all other areas of work undertaken by Phlorum. This includes assisting with the broader topics of EIA and sustainability assessments, and general office management.

There is the opportunity to progress to a more senior, managerial role within the company.

Requirements:

At least two years professional ecological experience, preferably within an environmental consultancy setting, is essential; as are good vegetation identification skills covering a range of relevant habitat types.

The successful candidate must hold NE/CCW/SNH protected species licences for great crested newt and at least one other species. Possession of a licence to disturb bats (or working towards this licence) would be highly desirable.

A driving licence is essential for the role.

Salary: £20,000 to £24,000 per annum

Closing Date: 19th March 2010

No Agencies

Please send your CV and a covering letter to: Dr Paul Beckett, Phlorum Limited, The Sussex Innovation Centre, Falmer, East Sussex, BN1 9SB (paul.beckett@phlorum.com)
